

- Reduce maintenance because natural gas is a clean burning gas
- Natural gas used by high compressed bus engines, provides excellent driving performance.
- Unlike other liquid fuels, no risk to be stolen by pulling out.
- Cylinders can be loaded in 3-4 minutes at stations which are fast and have big compressors
- At a system working with natural gas, ratio of greenhouse effect and toxic material are much lower than a fuel oil or an alternative engine.
- As a feature of natural gas system, evaporation emission is close to zero. This means, at least %50 of total hydrocarbon is evaluated.
- As a feature of natural gas, emission ratio of CO₂ reduces over %20.
- According to researches in many cities of USA, diesel exhausts are responsible for creation of some kinds of tiny particules increasing risk of respiratory tract diseases. However, just a few of these particules are found at natural gas systems.
- It is certain that expansion of using natural gas in a country or a region of a country, creates new job areas.
